Security, Risk & Governance

Trust in cloud is not assumed.

It is designed, governed, monitored, and reviewed.

Security | Risk | Compliance | Governance

Session purpose

Understand

shared responsibility

Identify

business risks

Ask

better questions

Security as a leadership topic

Cloud security is not only firewalls.
It is trust, accountability, and continuity.

CXO lens
reputation
compliance
business continuity

Hotel analogy

The hotel secures the building.
You still lock your room.

Leadership message
provider secures cloud
organization secures usage

Opening power question

If a cloud incident happens, whose responsibility is it?

Provider | IT | Security | Business | Vendor

Session journey

1. Why security matters
2. Shared responsibility
3. Cloud risks
4. Governance model
5. CIO/vendor questions

Why security matters to leaders

- Customer trust
- Compliance
- Financial exposure
- Brand reputation
- Continuity

Security is not the brake

Poor security

fear

delay

rework

Good security

confidence

safe speed

scale

Security humour

Security should not say only ‘No’.
It should say: ‘Yes, but safely.’

Shared Responsibility Model

Provider

security OF the cloud

Organization

security IN the cloud

Provider typically secures

- Data centers
- Hardware
- Core network
- Managed infra

Organization still owns

1. Data
2. Identity
3. Access
4. Configuration
5. Compliance
6. Monitoring

Hotel Analogy

The hotel provides:

building security room locks, CCTV

Guest is responsible for:

locking the door, protecting valuables

not sharing access cards, reporting suspicious activity

Responsibility shifts by service model

IaaS

more customer control

more customer responsibility

PaaS

shared platform responsibility

SaaS

provider manages more

customer still owns data

What always remains ours

Data. Identity. Access.
Governance.
These never fully disappear.

SaaS humour

SaaS does not mean ‘Security Absent and Someone else Solves.’

Still needed

ownership

access control

governance

Key cloud risks for leaders

1. Data security
2. Identity + access
3. Misconfiguration
4. Compliance
5. Lock-in
6. Continuity

Risk 1 | Data security

What data?

customer
finance
employee
plant

Where stored?

region
residency
retention

Who accesses?

role
approval
monitoring

Risk 2 | Identity and access

The biggest door in cloud is often not technical.
It is permission.

Leader ask

least privilege
privileged monitoring
inactive user removal

Risk 3 | Misconfiguration

A high-security locker is useless if the password is on a sticky note.

Examples

open storage
weak APIs
missing encryption

Risk 4 | Compliance

Privacy

personal data

Audit

evidence

logs

Residency

where data lives

Risk 5 | Vendor lock-in

Lock-in is not always bad.
Accidental lock-in is.

Leader ask

is dependency intentional?
does it create value?

Risk 6 | Cost governance

Shadow IT

unapproved usage

Duplicate environments

waste + exposure

Unmanaged access

cost + security risk

Risk 7 | Business continuity

If the cloud service fails, how quickly can business recover?

Ask for

- backup
- DR
- RTO / RPO
- tested recovery

Risk 8 | Partner access

Who enters?

vendors

SI partners

MSPs

What can they do?

roles

changes

monitoring

How do they exit?

revocation

data return

evidence

Compliance must be designed early

Compliance cannot be decoration added after the cake is baked.

Compliance checklist

1. Privacy
2. Residency
3. Auditability
4. Access control
5. Encryption
6. Retention

Proportional governance

Campaign website

speed

reasonable control

Financial data

high control

strong audit

Business Example

A marketing campaign platform

may not have the same compliance requirements as financial reporting or

HR data processing.

Governance humour

Maximum security for everything is like using a bank locker for onions.

Message

appropriate control
not maximum control

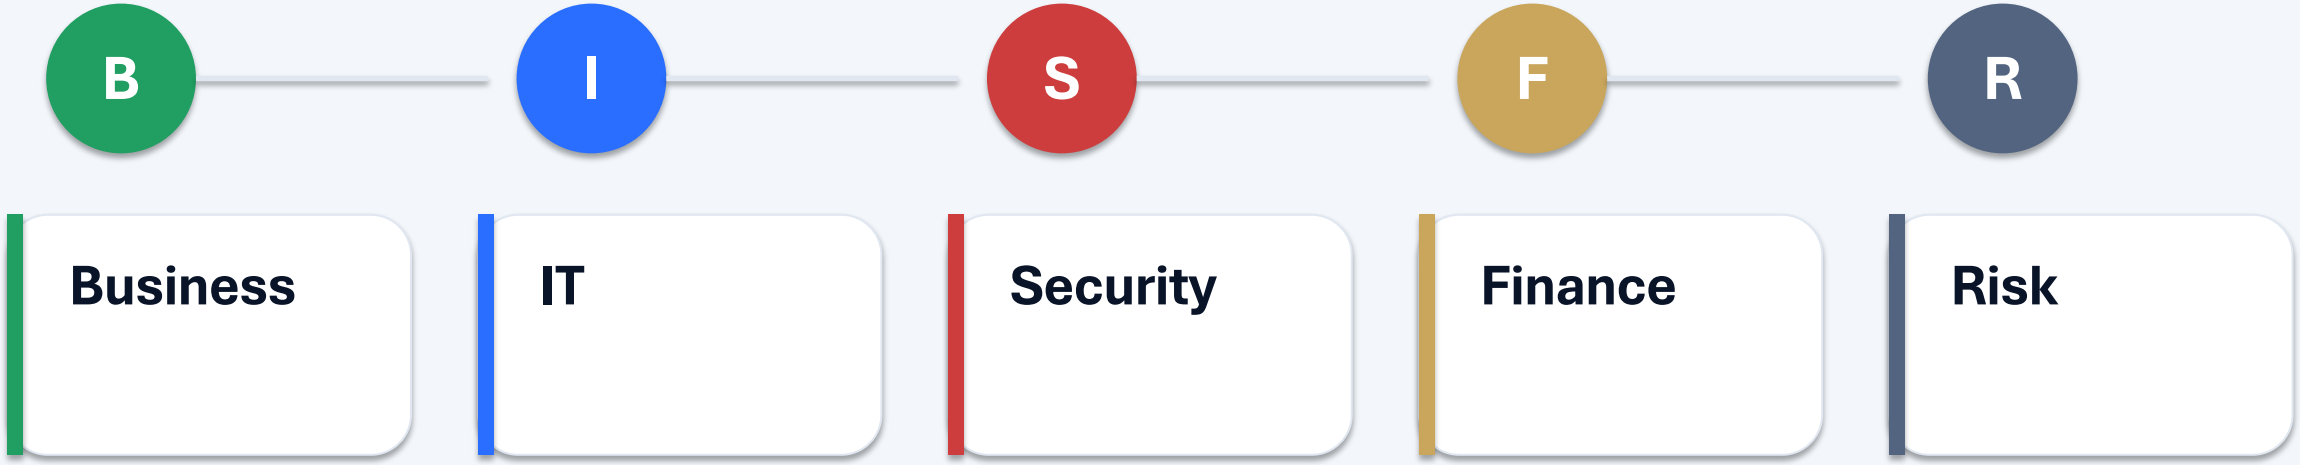
Cloud governance pillars

1. Strategy
2. Security
3. Cost
4. Data
5. Vendor
6. Operations

Governance humour

Governance is like traffic signals. Without it, everyone reaches nowhere faster.

Governance operating model



Ownership clarity

When everybody owns governance, sometimes nobody owns governance.

Required

clear roles
named owners
decision rights

Leadership Message

Cloud governance works

when ownership is clear.

If ownership is unclear,

everything becomes

“someone else’s problem.”

Vendor and partner accountability

Clarify

who owns what?

Measure

SLA

response

recovery

Exit

data return

deletion

transition

Vendor humour

Vendor promises are beautiful during the ceremony. Success depends on daily execution.

Discussion activity

Select theme

security

compliance

cost

continuity

Create questions

5–7 leader questions

Prioritize

top 3 questions

Question themes

- Security
- Compliance
- Cost governance
- Continuity
- Vendor accountability
- Data governance

Present

Area	Group Response
Theme	
Top 3 questions	
Why these questions matter	
Risk if not asked	

A. Security Questions

- Who is responsible for each layer of cloud security?
- How is identity and access managed?
- Are privileged users monitored?
- Is data encrypted at rest and in transit?
- How are misconfigurations detected?
- What security monitoring is in place?
- What is the incident response process?

B. Compliance Questions

What regulatory requirements apply to this workload?

Where will the data be stored and processed?

How will audit logs be maintained?

Who can access compliance evidence?

How is data retention handled?

What is the process for incident reporting?

Questions leaders should ask

Security

who owns each layer?
how is access managed?
what monitoring exists?

Compliance

where is data stored?
are logs audit-ready?
what regulations apply?

Continuity

what is RTO/RPO?
are backups tested?
who leads outage response?

Session close

Cloud security is not about stopping cloud.
It is about enabling cloud with confidence.

Risk-aware capability built

shared responsibility
governance questions
vendor accountability

Thank You

Let’s continue the cloud, AI and digital transformation journey.
